

IN THE CLAIMS:

Please amend the claims as indicated below.

1. (Currently Amended) A method for delivering an email message to a recipient, comprising:
 - receiving said email message from a sender;
 - obtaining a presence status of said sender from a presence server, wherein said presence status indicates a presence status of said sender across a plurality of domains; and
 - delivering said email message to said recipient with an indication of a presence of said sender on one or more of said plurality of domains.
2. (Original) The method of claim 1, wherein said presence server extracts presence information from a plurality of presence data stores.
3. (Original) The method of claim 2, wherein said presence server translates said presence information to a standard format.
4. (Original) The method of claim 1, wherein said presence server determines said presence status of said sender based on one or more rules that aggregate extracted presence information.
5. (Original) The method of claim 1, wherein said recipient responds to said sender in another domain.
6. (Original) The method of claim 1, wherein said presence information indicates if the message sender can be reached at one or more indicated devices.
7. (Original) The method of claim 1, wherein said presence information is obtained from a user registration process.

8. (Original) The method of claim 1, wherein said presence information is obtained by observing activities of a user.
9. (Original) The method of claim 1, wherein said recipient can respond to said sender in real time.
10. (Original) The method of claim 1, wherein said recipient can respond to said sender in non-real time.
11. (Original) The method of claim 1, wherein said recipient can respond to said sender using a non-textual form of communication.
12. (Original) The method of claim 1, wherein said plurality of domains is a plurality of client domains.
13. (Original) The method of claim 1, wherein said plurality of domains is a plurality of server domains.
14. (Currently Amended) A method for delivering an email message to a recipient, comprising:
receiving said email message from a sender;
obtaining a presence status of said sender across a plurality of domains;
and
providing a mechanism with said delivered email for said recipient to automatically respond to said sender at a device associated with at least one of said plurality of domains where said sender is believed to be present.
15. (Original) The method of claim 14, wherein said providing step allows said recipient to respond to said sender in another domain.

16. (Original) The method of claim 14, wherein said recipient can respond to said sender in real time.
17. (Original) The method of claim 14, wherein said recipient can respond to said sender in non-real time.
18. (Original) The method of claim 14, wherein said recipient can respond to said sender using a non-textual form of communication.
19. (Currently Amended) An apparatus for delivering an email message to a recipient, comprising:
a memory; and
at least one processor, coupled to the memory, operative to:
receive said email message from a sender;
obtain a presence status of said sender from a presence server, wherein said presence status indicates a presence status of said sender across a plurality of domains; and
deliver said email message to said recipient with an indication of a presence of said sender on one or more of said plurality of domains.
20. (Original) The apparatus of claim 19, wherein said presence server extracts presence information from a plurality of presence data stores.
21. (Original) The apparatus of claim 20, wherein said presence server translates said presence information to a standard format.
22. (Original) The apparatus of claim 19, wherein said presence server determines said presence status of said sender based on one or more rules that aggregate extracted presence information.

23. (Original) The apparatus of claim 19, wherein said recipient responds to said sender in another domain.

24. (Original) The apparatus of claim 19, wherein said presence information indicates if the message sender can be reached at one or more indicated devices.

25. (Original) The apparatus of claim 19, wherein said recipient can respond to said sender using a non-textual form of communication.
